

Nimesh Kumar on TrueFan AI's Vision and Impact

[0:00] Baniya Marwadi family.

[0:02] Went to IIT Kharagpur to do my engineering.

[0:05] Learned a lot, changed the arc of my career.

[0:07] Came to Bombay as a young lad back in 2015, 22nd June, one of the heaviest rainfall days in this decade.

[0:18] Started with a consulting firm called Parthenon, boutique consulting firm based out of the US.

[0:23] Now they're part of EY.

[0:25] Travelled to over 18 countries in one year because we used to do global work.

[0:30] Post that, moved to Warburg Pincus, which is one of the largest private equity funds in India, obviously globally.

[0:39] Spent two years there, used to cover technology, BFSI, which was that's the 40% of stock market.

[0:47] Met a lot of entrepreneurs, learned that whatever these people are making, they are making it from this same soil, no one came from Mars.

[0:55] So, you know, decided to quit, start up our company called TrueFan AI.

[1:01] We should get the award for best timing because we started our company in February 2020, a month behind COVID, right?

[1:10] And then obviously things stalled by.

[1:13] So we'll get into presentation, we'll talk about what we're doing.

[1:19] It's not on the screen yet.

[1:20] I think our presenting is not on the screen.

[1:28] Yeah.

[1:29] So what are we doing?

[1:30] We are doing future of AI is video, right?

[1:34] Why is it video?

[1:36] See, the best form of communication happens in person.

[1:40] We are all in person.

[1:41] So, you know, I'm able to talk to you.

[1:42] You are giving your time.

[1:44] I am, you know, spending that time.

[1:47] But unfortunately, in person is not scalable.

[1:50] For how many times can we all be in this room again like the way we are?

[1:54] Answer is never again, right?

[1:56] It's not going to happen ever.

[1:58] We never have the same set of people being in this room again.

[2:01] Therefore, in-person time is not scalable.

[2:05] The next best alternative is video.

[2:08] After that is voice and after that is text, right?

[2:13] So text is easiest, then comes voice and then comes video.

[2:26] Let us play some videos for you, you know, and ours is a business which is a lot more show than tell.

[2:32] So I'll play some videos for you and you know, then we'll talk more through this.

[2:38] Sound, it needs to work.

[2:43] Sorry, technically, it's not, the AV is not connected.

[2:52] Don't worry, I'm used to it, happens always.

[2:56] That's the fun with technology, right?

[4:10] So I can use keyboard?

[4:18] Keyboard?

[4:19] Good.

[4:20] Yeah.

[4:21] Back to the basics, right?

[4:24] So let's play a couple of videos for you, and then we get started, right?

[4:32] Hello Bharat, hope you are doing well.

[4:34] Hello Shivam, hope you are doing well.

[4:36] Hello Soumya, hope you are doing well.

[4:38] Just like you don't leave the match until the last over, don't leave your hotel booking for the last minute.

[4:44] Book your Lucknow trip, your Rishikesh trip, your Delhi trip, book an amazing garden view stay, amazing lake view stay, amazing city view stay, only on OYO.

[4:54] Book the deal, book the hotel on OYO.

[5:18] Video.

[5:28] So marketing will call you an abandoned card customer and they will get a message saying Nimesh hi 500 rupees off on your next booking and you get a dirty WhatsApp message which we archive.

[5:38] What they are doing now is those texts are being replaced with video.

[5:43] Why video?

[5:44] Because video is the most important form of engagement, the best form of engagement possible and therefore they see higher return on ad spends.

[5:54] Marketing can tell a better story, they can communicate far better with the customer.

[5:58] This is applicable to every customer journey, every dealer distributor journey, every employee communication, all imperative, right?

[6:06] I'll play the second video for you and then we go into some more knowledge sharing.

[6:18] Yaar, this year I did a lot of shopping.

[6:38] Shobha Deepawali.

[7:01] Quite self-explanatory, an ad film is shot in one language.

[7:05] Unfortunately, India is not the same India where only one language matters.

[7:10] You know, every state has a different language.

[7:12] There are so many Indians sitting here, all speak different languages, multiple languages, some speak more than three.

[7:18] Communication was always happening in English or Hindi, not anymore.

[7:22] Every single brand now records a video in one language, converts into multiple languages because they want to speak the voice of the customer, voice of the dealer, voice of the agent, right?

[7:31] I just gave you...

[7:32] Video to show you what we do as a company.

[7:35] We are a AI video communications platform.

[7:38] Typically, a face is taken for 5 minutes, and then the face and voice print are cloned.

[7:45] After that, you can make as many videos as you want.

[7:48] The question is, why make videos?

[7:51] Why does it matter?

[7:52] Right?

[7:53] It's very simple.

[7:55] We have moved on from our personal life to Instagram, YouTube, and Netflix.

[8:00] Our corporate ride is still going on, we are still reading HR onboarding forms, policy is coming from Max Life Insurance, we are reading policy, research is published, we are reading their report, but life has changed, personal life is on video, nothing on text, news is on Instagram, professional life is only on that, that's changing very fast, right?

[8:27] Because video is the most efficient form of engagement.

[8:30] If you can do something with video, it's very good.

[8:35] If it's so efficient, why not?

[8:37] Because AI is actually making video scalable for the first time.

[8:42] Every enterprise has always wanted to do video first in nature.

[8:46] If possible, you will always want to do a video first.

[8:49] But video requires production, planning, cost.

[8:55] There is a tam-jam to it, right?

[8:56] It's better if I e-mail you, it'll be faster.

[8:59] The friction to video, obviously, always sort of what I call limited the demand of it.

[9:04] Go back to the era, pre-era, when I was in college, I think one GB costed about a hundred rupees.

[9:10] And you could sort of cap that out on your messages with your, you know, department that you were dating in the college in one day.

[9:17] And after that, you know...

[9:19] Den, you know, you just pack in your pocket money, but as internet expanded, the usage, as the cost of sort of internet came down, data came down, usage, you know, went up by 100x.

[9:30] It's called Jovan's paradox.

[9:31] As you keep reducing the friction of things, their demand will increase in a way that you can't imagine at that time.

[9:39] You'll think, "Oh, this is..."

[9:41] we didn't even model it yet.

[9:43] You know, biggest beneficiary of Jio era was Airtel, where the stock price was flat for many years and then now it's like 3X, right?

[9:50] But hindsight, 2016, you will say, oh fuck, you know, internet companies won't make money ever, right?

[9:55] So that's what we believe.

[9:56] We believe that video is the most efficient form.

[9:59] It was always limited by the ability to scale video.

[10:03] AI and in particular us with AI changes that forever.

[10:07] Now you're moving in the era where video will be as easy As typing an e-mail, video will become what I call on-demand in nature, right?

[10:15] You will never have to shoot plan, you know, think about a video six months in advance or even six days in advance or even 6 minutes in advance.

[10:23] You can start there.

[10:25] Few customary credentials, like I would like to talk about it, but we have to.

[10:28] We are 6 years in the AI business.

[10:31] We were in the AI business before AI became AI.

[10:34] You know, we were advocates of this business, of this technology.

[10:37] At that time, it was called deep learning, neural network, machine learning.

[10:40] If someone didn't understand it, they called it cloning, morphing, editing.

[10:46] At the advent of ChatGPT in September 23, it all came down into one umbrella called AI.

[10:53] Raise about 200 crores of capital, we own 90% of this market, created 2 crore AI videos alone in last one year, we work with 145 enterprises in this country, we work with everyone, you know, we pick up bank, we work with HDFC and ICICI, Bajaj, you know, Ashwira, Kotak, DBS, blah blah if you pick up insurance, we work with HDFC Life, SBI Life, ICICI, Max Life, Universal Sompo, PMB MetLife, etc.

[11:22] Lead BFCI in healthcare, we work with Sipla, Sun Pharma, Mankind, Intas, Doctor Reddy's, Abbott, Novartis.

[11:29] We work with the lines Tata, Adani, Birla, Bajaj Group, all across the board because video is a sector agnostic problem and you know we kind of cover that given our audience is a lot of mutual funds and I was in private equity.

[11:40] I think this slide will impress you more where we work with all leading sort of companies across every sub-segment of BFSI.

[12:08] Worked, but we were in Shahrukh Khan, Ranveer, Kareena, Rohit, Anushka, Rishabh, and Jacqueline, and there are many more, over 200 of them.

[12:16] The good thing is that we have had a journey of six years.

[12:19] 200 celebrity mein se 190 ko AI kya hota hai?

[12:22] Maine khud unko samjaya hai.

[12:24] Main unko bataya ki dekhie, you know, ismein aisi aisi ho jayega, phir aapko time nahi dena padega, phir video apne aap ban jayega, aapke time ki value hai, time multiply ho jayega, aisa ho jayega, waisa ho jayega.

[12:35] My first celebrity was Ranveer Singh, you know, here in Beaumont, we met him, I think October 2020, and Ranveer ne bola, yeh toh kala jaadoo kar diya tune mere channel par, toh maine bola, sir, abhi kala jaadoo se kiya, aage badho.

[12:46] So, if you have some money, you can do a good job.

[12:49] So, that's all.

[12:49] This is just customer credibility.

[12:51] Move to what we do, right?

[12:53] We power communications.

[12:55] There are two kinds of communications, external communications, internal communications.

[12:59] External is simple.

[13:00] You have customers, prospects, channel partners, agents, what I call dealer distributor.

[13:05] India is a large country.

[13:07] B2C is, you know, put not in most companies.

[13:10] Majority companies work through dealer distributor, franchise partner, agent networks.

[13:14] You have to do communication with them almost every time: internal communication, employees, teams, field force, sales rep, you know, pick up an Mr.

[13:21] for a Sun Pharma, a distributor for a Bajaj, a dealer for you know, Rani Vilmer, etcetera.

[13:27] All those communications were e-mail text based, now they are in video, localized in the language, personalized to the end recipient, adoption goes up by 60%, revenue goes up, and you know, you kind of become a product which powers that.

[13:40] Apart from that, we power all the videos, training content, products, planners, TV, social media, brand films, almost video, we can do

all that by and large.

[13:53] some videos that will give you an idea about what is the kind of work enterprise is doing and how they have pushed us to do the work that we are doing.

[14:01] We are a product of customer.

[14:03] As the customer comes, the videos are made.

[14:06] Not everything was imagined on day one.

[14:08] We will play a simple video.

[14:09] Have a look at it.

[14:14] Namaste navin ji adani billmar ke sabse bade distributor incentive program udan mein participate karne ke liye aapka bahut bahut shukriya main to bahut excited hoon.

[14:24] aare udan aapke liye golden opportunity jo hai apni mehnat aur lagang se ek shandaar foreign trip jeetne ka mauka.

[14:31] forty seven ton ka target complete karne ke liye agle do mahino mein aapko karna hoga sirf aur sirf forty one ton.

[14:39] aapke aur aapke dream abroad trip ke beech ab bus kuch hi kadam ki doori hai.

[14:44] Adani Wilmar, Fortune Oil, Van and Three Oil, in India sold as Adani Wilmar, they have 35,000 distributors across India.

[15:00] Our is a village, they are all the, and the, and the, English, English, When we started, it's been third year running.

[15:32] Every form of those communications have become video first.

[15:35] They take up a face because they have money.

[15:37] They will spend on a celebrity.

[15:39] If you don't have money, you can take up your CEO's face or a general face and they'll train a model and then you'll go out and talk to your distributor.

[15:46] Adoption rates of schemes are up 60%.

[15:47] So if I had 35,000 distributors.

[15:51] 10,000 or 12,000, his communication will click, but the number of

20,000-22,000, if the next you adopt, it will be why, because the work is not understood, when my language is spoken, as you go mass, it matters a lot more, right?

[16:06] So, all their forms are done with this level, this is same excited for an Asian Paints, with dealers who work with us, for a, you know, JSW Paints, for a merger, for...

[16:15] you know, Bajaj Finance with their distributor network for Zomato, for their partners, etcetera, multiple, so which is the first week, intermediary relationship, it could be what I call dealer, distributor, agent, channel partner, franchise, etcetera, etcetera, that is the name, those are the forms of video first in nature, but then.

[16:34] I'll play you another video which is also interesting where Axis Max Life, now they have money, they have Rohit Sharma as a celebrity, but yahan pe public market company hai, Sumit Mudan unke CEO hain.

[16:44] Unhone bola yeh yeh, meri agents ko ya mere dealers ko to main khud hi baat kar loonga, Rohit Sharma kya baat karega, toh aap mera hi avatar bana do.

[16:51] So he created an avatar for him and now he does regular coms, you know, for all internet people with his avatar.

[16:58] Have a look at this.

[16:59] Dear Ayaz Khan, congratulations on achieving this remarkable milestone as an MDRT winner.

[17:04] This globally respected recognition, earned by barely 1% of insurance professionals worldwide, reflects the deep trust families place in you, your integrity, and your unwavering commitment to protecting what truly matters.

[17:19] Your achievement not only strengthens Axis Max Life Insurance, but also raises the bar for our entire industry.

[17:25] I am confident this is just the beginning, and I look forward to seeing you scale even greater heights in the year ahead.

[17:32] Thank you for the care, discipline, and conviction you bring to every family you serve.

[17:40] So depending on the season, he'll wear a jacket and then there's

an avatar talking to you in that season.

[17:47] So it looks very fresh and content-like.

[17:49] So there's an example of where if you want to go even sort of personal leadership are making, he's not the only one.

[17:56] There are many CEOs now coming to us and say, please create my avatar.

[17:59] I want to talk to my team that way.

[18:00] I want to talk to my agents that way.

[18:02] I want to talk to my distributors that way.

[18:03] And it's almost going to become mainstream where in future your investor updates are going to happen that way.

[18:10] to your sort of people in video.

[18:12] One of the use cases is collections, because you do BFSI.

[18:17] BFSI, the biggest thing is that loan is very easy to give, but loan collection is very difficult, right?

[18:23] And you know, we work with many BFSI clients.

[18:25] I will show you a case study which is in a live.

[18:28] Suppose, aapne loan liya hai kisi bank se or bfc se and aap obviously repay nahi kar rahe hain kyunki kisi ko loan repay nahi karna hota hai to aapko pehla message kaise aayega?

[18:38] Pehli baar aapko bhat pyar se reach out karenge something like this.

[18:41] Namaste Abhishek Kumar Sikhandyaji, hamasha karte hain ki aap aur aapka parivaar swasth aur kushal hain.

[18:48] Bas aapko ek chota sa reminder dena tha ki aapki emi due date 17 Jan ko due hai.

[18:53] Ye 8,88,888 rupees ki emi hai.

[18:58] You get it right, so polite, nice, female, gentle, calm.

[19:17] नमस्ते अभिषेक कुमार सिंघानिया जी, मैं पर्सनली इसलिए संपर्क कर रहा हूँ क्योंकि आपका लोन विस्तार फनैन्स.

[19:25] के साथ अब 90 दिन से ज्यादा ओवर ड्यू हो चुका है और अब अधिकारिक रूप से

एनपीए मार्क हो गया है। पिछले कई हफ्तों से हमने आपसे संपर्क करने की कोशिश की।
म्यूसिक लेकिन न पेमेंट प्राप्त हुई और न ही कोई रिस्पांस मिला। इसलिए यह बताना जरूरी है
कि यह सिर्फ रिमाइंडर नहीं है। लीगल रिकवरी अक्शैन शुरू हो चुका है। इसका अर्थ यह है कि
आपका लोन अब सीरियस डिफॉल्ट स्टेटस में है,

[19:53] जिसका सीधा असर आपके सिबिल स्कोर और क्रेडिट हिस्टरी पर पड़ रहा है। आपके
साइन किए हुए अग्रीमेंट के अनुसार लीगल स्टेप्स लिए जा रहे हैं।

[20:03] म्यूसिक। So you understand, right?

[20:04] So ideally, if NBSC had the power, they would go to every
customer and say, "Mera paisa wapas karo, ya mera interest wapas karo."

[20:11] But that's not going to happen, right?

[20:14] Therefore, they create these avatars, go out and do the talking,
and communicate the message the way they like.

[20:19] This can be then done in multiple languages, with different kind of
facets, avatar, by cohorts, make my people say, "My Amilash platform, my
young audience deserves a different face, my older audience deserves a
different face, older audience which are going for, you know, family sort of,
event, this is a different phase.

[20:35] Younger which are going for honeymoon, this is a different phase.

[20:37] Younger who are going for, you know, Airbnb stays, this is a
different phase, right?

[20:41] Every communication is getting very, very personal, right, at the
level, right?

[20:45] Now, this can also extend to what I call conversational stuff.

[20:48] This I like a lot because this is first time where we're going to TV
commercial grade, client-led history, Ram Life Insurance, you know, big
company as a group, right?

[20:57] Let me play the video first and then we'll talk about it.

[21:00] Aapke paas kaunsi policy.

[21:23] मेरा लाइफ इन्श्योरेन्स लाइफ कबे में ओवर होते ही नॉमिनी को फुल पेआउट देता है।

[21:23] पेआउट सिर्फ लाइफ के बाद क्यों किसी गंभीर बिमारी होने पर भी मिलना चाहिए,
लेकिन मिलता नहीं सर, अब मिलता है श्री राम लाइफ टैक्सी शील्ड पॉलिसी गंभीर बिमारी के
डायग्नोसिस पर 50% कवर्ड तुरंत देता है और बाकी कवर.

[21:25] चलता रहता है, बिना किसी प्रीमियम के।

[21:25] जरूरत जैसी पॉलिसी, वैसी पूरा टीवी कॉमर्शियल एआई से बना है। Rahul Dravid and the gentleman who is on the side shot differently, brought on the table.

[21:34] They are doing what I call a conversation about a complex product like insurance, explaining it in simple terms, explaining the terms, you know, one by one.

[21:42] Normally, a TV commercial, you have to shoot.

[21:45] broadly, the fee is 50-60 lakhs depending on the agency you hire.

[21:51] And you can do one commercial and then you know, you'll spend it into multiple markets because you play across, you know, media.

[21:58] You spend 10 rupees in content creation, 90 goes in distribution of that content.

[22:02] So you spend 50 lakhs in creation, 5 crores in distribution.

[22:05] Now what's happening is we've created this video which is, you know, done in 10 times or 15 times lower cost, probably about 3 lakhs to create this video.

[22:13] And now they will not just One video, but 10 different videos of different policies that they have as a company.

[22:20] You don't have one product, you have infinite products, and then you will convert it to multiple languages, which is 8 languages.

[22:26] So now you're playing 20 different commercials in different markets.

[22:29] You're able to address the product better, you know, sharper.

[22:32] Right, you have a very good, which is unlock, which is unlock, which you have to, which you have which you have, which is like, you know, like I told you, we were six years in the business, right?

[22:52] So, what were we doing for that long?

[22:53] AI happened only three years ago, right?

[22:55] What were we doing in the first three years, right?

[22:57] Humne dekha ki yeh humne is it start kiya tha, so you know my journey was I was big celebrity fan, which also you can you know you can

judge from that, right?

[23:05] So I gatecrashed Rohit Sharma's wedding in Sinfregis in Bombay in December 2016 to meet Virat, I have a selfie with him, I have an actual tennis player, an autograph from Roger Federer on my cap, so I always when I quit, I always thought that look.

[23:19] You know, celebrities are aspirational, not accessible.

[23:22] And the definition of you being a celebrity is like, you can spend money, but the value of time is so imperative.

[23:29] So we always thought first principles, celebrity, celebrity doesn't mean Bollywood.

[23:35] It means, you know, Mukesh Ambani is a celebrity, you know, Sumit Madan is a celebrity with access to anyone whose time is valuable is celebrity.

[23:43] Celebrity, 10 minutes.

[23:45] तो उसका चेहरा हम कुछ क्लोन करके टेक्नोलॉजी से बनाके हम उसको फिज़िकली उस इक्वेशन से बाहर रहे एंड कैन वी टेक्नोलॉजी राइट दट वास् आवर ऐडिया बेक इन 2020 देर वास् नो ए आई वी वास्। good guy in media, technology and sort of you know has a lot of money.

[24:04] I think that's most important.

[24:05] So he said, aapko badhiya hai, achhe ladkiya aaye hai, chalo aapko kaise jaisa hai, banaiye technology.

[24:10] Took an asymmetric bet, raised about 3 million dollars, asymmetric bet, pre the world of AI, hired our first engineer in Israel, second engineer in Ukraine, third IIT Bombay, fourth IIT Kharagpur, fifth IIT Bangalore.

[24:22] To say, yeh problem statement hai, agar ek baar Ranveer ko pakad ke 10 minute loonga, uske baad dobara kabi timing nahi dega, woh video banane hai, bohot saare.

[24:30] So what we unlock Because give me a face and I will give you back the time and the idea was very first principle like a buddhi ki agar aapke aapke samay ki value hai aur main aapka samay hi multiply kar diya toh phir multiply samay ki value bhi honi chahiye aur agar maine multiply kiya toh mera success bhi hona chahiye.

[24:46] Bhai, kuch aap log hai, kuch hum kahenge toh that's the that's the zone that we played in which today plays out in almost every celebrity work that's happening.

[24:54] companies like SBI life you know they basically signed up these two celebrities Ravindra Jadeja and Rishabh Pant for three years with their AI rights and then they floated referendum internally to say bataiye kya aapka content chahiye and you know normally the power of content is only in the hands of two marketing guys but now HR also came by and said yaar employee moral ke liye bhi agar Rishabh

[25:16] Pant kuch bolde toh acha rahega right kyun ki bhai kab tak humi unko you know raboli bana ke dikhaate rahenge toh toh hamare ka side kuch

[25:24] 900 add films 900 add films to say our.

[25:35] Because our objective is that we are going to time multiply, so Rishabh is wearing a blue coat, Jadeja is wearing a red coat, whatever orange coat, and they said, Saree video, they will be a little bit, it will not be fun, they don't know what they are doing, so we took an attempt to say, Okay, look, if the celebrities were short standing,

[25:51] could we make them sitting right and have a look at what we are doing.

[25:56] Freedom is not just about.

[25:58] Independence, it's about the ability to do whatever you want.

[26:08] And that's what this film is all about.

[26:11] So, I'm going to play the film for you.

[26:15] You'll just have a look and you'll understand what technology has done, right.

[26:19] So, I'm going to play the film for you.

[26:21] You'll कई तरह की अनकही गारंटी भी देती है। हाजोली जैसे गारंटी सपनों के साथ जाती उम्मीद की अपनों के चेहरों पे खिलती 2 इंच एक्स्ट्रा मुस्कान की सेकंड इनिंग्स में.

[26:34] फ्रंट फुट पे खेलने के हौसले की फिफ्ट से दूर जाके सफर में मिलते सुकून की जब कोई हमें दिल.

[26:35] से आजाद फील कराता है तो इंडिया को मिलती है 100 मेहरे कल की गारंटी। And, for the sake of the country, do all your efforts.

[26:53] Do it for yourself and for others.

[26:55] SBI Life, for yourself and for others.

[26:59] This entire film was made in 5 days without any celebrity shoot.

[27:03] I can tell you, if you do it, you won't be able to coordinate so well.

[27:06] You know, you go and talk to the director, you'll know very well, right?

[27:09] So, look at the time to market, that shrunk to almost zero.

[27:13] Look at the ability that a marketing guy now has today to produce content in a very technical way and say, the cost of creating an additional video is going down to zero.

[27:23] And therefore, I have that power now to use my content budget in the ways I wouldn't otherwise.

[27:27] I will talk to every of my customer the way I would like.

[27:30] And I would almost go down the human route of talking, otherwise creating sort of things.

[27:36] So I give an example of what SBI did.

[27:38] Big example, Bajaj Finance, stock markets, all of that thing.

[27:43] we have been sort of the multi-bagger.

[27:45] They are our largest customer.

[27:46] I kept them till the end.

[27:47] We have about three more slides, right?

[27:49] Bajaj Finance came to us in October 24.

[27:52] They saw us because, you know, as we were, you know, a little bit of like start of our company, right?

[27:56] Jab humne shuruat ki to humne consumer line se shuruat ki thi.

[27:59] Humhe laga tha celebrity ka kahi multiply karenge, customers ko video denge, fans ko video denge.

[28:04] You may have seen some ads of Kareena Kapoor wishing people happy birthday or Ranveer Singh, you know, wishing people.

[28:10] We build that product out.

[28:12] As our videos were sort of going by and you were scaling up

platform, right?

[28:16] We accidentally met Dipinder Goel, who had used our consumer app.

[28:19] And then he called me in March 24.

[28:21] He said, "Yaar, bahut achha aapne toh AI first product banaya, but aap toh bhi marketing nahi karte ho, famous nahi ho.

[28:27] Aisa karo yaar, brands ke saath kaam karo.

[28:29] Brands mein bahut bada market hai.

[28:31] You know, you will unlock something of very tremendous value."

[28:34] Dipinder led Zomato becoming our first customer.

[28:36] Zomato obviously is a flagship of marketing, as you know.

[28:39] So they put our stamp on something and people thought, "Okay, this is a new norm, right?"

[28:42] Seeing that, Bajaj Came to us October 24th, very, very credible, high-quality AI forward company, whoever follows the running score know that they are the market leaders in adoption of AI in enterprises in India, by far, you know, by far, and it's led from Sanjeevji and Rajivji, you know, at the top, they have created, you know, fast, we are in September,

[29:02] but go back to the March 26th of this year.

[29:05] From October 24 to March 26, 18 months, Bajaj has called its entire company videoize, right?

[29:13] They point out this term called videoization.

[29:16] They've hired a team of 150 people to videoize every customer journey.

[29:20] Start with EMI sales, summer promos, product launches, gold loan, personal loan, cross-sell, adoption, event participation.

[29:29] We made 17 lakh videos in 1.5 years.

[29:32] And the imperative of that was that this year, in April, they renewed our contract for over 1 crore videos.

[29:38] So 17 lakh videos are so good that the company is saying, "We're going to go further and make 1 crore videos."

[29:44] This is a slide to show you.

[29:46] On what depth can you work with an enterprise?

[29:48] Hum dhoondh se dekhte hai to video lagta hai, video hi to hai, but video video nahi hai, short, long, pixel, resolution, phase, non-phase, cinema, non-cinema, product.

[30:00] Conversation blah blah You know, so you'll get a map, a Bajaj Finance, 1.5 crore video, 2000 cinematic video, 10 vertical, 20 active use case, 103 POCs in that company.

[30:16] I mean, you know, I don't understand what you're trying to say.

[30:21] You know, sales.

[30:22] Distribution, loans, adoption, branding, social media, good thing is, Bajaj, anyone will watch the video, every quality, you know, some bad quality, because there are budgets, some very good quality, because there are big budgets, right?

[30:34] All of those videos, by and large, we create, because we are in Bombay, I will just show you one, and then, you know, we will end up sort of in the last slide, just.

[30:43] Have a look at this one, right?

[31:24] Mumbai ki barish aur aapke deej sirf khushiyan ho jaayein.

[31:33] Zahir se baat hai video aisi hi banaye.

[31:35] So everything that we create is with AI, right?

[31:37] You know, last segment, this is what the work we've done with enterprises, very humbled about what kind of reception we've had.

[31:43] We onboarded our first customer in form of Zomato in...

[31:46] March 24th, April 24th, in the last two and a half years, about 150, 148 customers, to be precise, across all categories, coming by, right?

[31:55] But this is all happening, what's the future, right?

[31:57] What I believe is, as any products get better, customers always want faster, cheaper, better.

[32:05] These are three big themes.

[32:07] When Bezos says, don't ask me what will happen in 10 years, e-commerce, it's very hard.

[32:12] But what I can tell you is, what won't happen in 10 years.

[32:15] Customer will never come and say, Give me better, give me slower, give me faster, give me cheaper, give me mehnga, it's not going to happen, right?

[32:22] So, we apply the same principles to say, what can video be?

[32:26] How can it be faster, better, smarter, cheaper, etc.?

[32:31] We're taking a brilliant attempt, this is not live, this is a demo, we're creating a demo where we say, what if video which was asynchronous, I was sending you a video.

[32:44] Becomes synchronous, we have done this in voice, world has got enough voice calls, every phone rings with a voice call, AI is talking, and those are what I call push-based sales, but what if when you really need...

[32:57] A pull when you have a question and you need an advice, you're a farmer in some town and you want to talk to some mentor helper, you've taken a loan from Bajaj, you genuinely have five questions at that time, there is no AI at play.

[33:08] Tap to you, you'll have to go to their dialer and press the button to reach them.

[33:12] You know, I was at insurance, you know, HDFC Life, you know, call insurance, four times you have to talk to them and explain, hey brother, you talk to them and then you know, we'll go to the next step, right?

[33:21] So what we're doing is first attempt.

[33:29] Hi Raj, welcome to Bajaj Finance.

[33:32] Loan explore karna ho ya investments ki baat karni ho, bataye kaise help karu.

[33:37] Meri liye kaun sa loan options available hai.

[33:40] Aapke liye gold loan aur ek pre-approved personal loan dono options available hai.

[33:45] Kisse shuru kare.

[33:46] Mujhe gold loan ke baare mein batao.

[33:48] Aapke liye do options hai.

[33:50] Ten lakhs at 9.5% with twenty-one thousand rupees per month

EMI, ya six lakhs at 8.9% with twelve thousand five hundred rupees per month EMI.

[34:02] Disbursement lagti time lagto ani collateral daival lagel ka.

[34:06] Raj ji, ya loan saathi kontha hi collateral lagrana nahin.

[34:09] He shambhar dakke unsecured loan ahin.

[34:12] Ani disbursement hota instant.

[34:15] Kahin cases madhe faktat 30 minutea paise account madhe hetan.

[34:19] Okay, aage badhte.

[34:21] Okay, perfect.

[34:21] Screen, perfect circle, center, and smile.

[34:23] Liveness check done.

[34:24] Now, pan card camera, camera, perfect.

[34:29] Screen, perfect circle, center, and smile.

[34:33] Liveness check done.

[34:35] Now, pan card camera, camera, camera, camera.

[34:47] You will be able to soon talk to a video like you would talk to your relationship manager, doctor, coach, teacher, etc.

[34:54] It will be answering you in real time.

[34:56] We will deploy the best agency systems possible.

[34:58] You know, we are talking about multiplying the time of celebrities, we will multiply the time of humanity.

[35:04] So, you know, as individuals, we will be able to create your avatars.

[35:07] You will have digital agents, video agents talking to you, a sort of a question, right?

[35:12] And my presentation, I think next time, hopefully, I will take this presentation.

[35:16] But till then any questions you have, I'm happy to answer.

[35:20] Excellent.

[35:21] Thank you very much, Premish.

[35:22] There are a lot of questions.

[35:23] Let me get started with them in the interest of time.

[35:26] I think the first and the most common one is, is there a legal agreement or restriction about how much or what time duration can you use the videos, especially for celebrities?

[35:36] Sir, answer is obviously, we have made two crore AI videos.

[35:40] It is an identity first, consent first mechanism.

[35:43] We tell the celebrity, you have to do two things.

[35:46] First, you consent, give us a consent to create your AI avatar.

[35:50] Now, consent doesn't mean anything, it just means we can create it.

[35:53] Then, there is an explicit approval on distribution of videos.

[35:57] Simple language, what happens in Photoshop, if you would create, click a picture of celebrity, now you create different poses, change outfits, etc.

[36:05] The same thing is happening in the video.

[36:06] So, it follows an approval of consent and distribution.

[36:09] we educate the celebrity, educate the brand both.

[36:12] We're also educating them to label videos that this video was created with AI with consent from Mr.

[36:19] Rishabh Khan, you know, Mr.

[36:20] Shahrukh Khan, Mr.

[36:21] whoever, whoever, not everyone doesn't like to agree with us, but sure.

[36:24] So this is always done with full legal compliance.

[36:27] Celebrity ke approval ke bina ek video bahar nahi ja sakta hai.

[36:30] And that's like imperative, right?

[36:32] And you know, we have to build the supply demand trust both ways, on the brand side and the talent side.

[36:37] Thanks.

[36:38] I think the second question is, and I think I was just going to come

to this, which LLMs do you use to build your models?

[36:47] Which AI tools do you use?

[36:48] Yeah, this is funny one because we get asked a lot.

[36:51] Good thing is we build our proprietary foundation model.

[36:53] Like I told you, we were in the business before AI became AI.

[36:56] You know, when there's no one to help you, you help yourself, right?

[37:00] So we use our proprietary foundation model.

[37:02] We build our model over many, many years.

[37:05] And why don't we use LLMs?

[37:07] What is the model used in the world?

[37:14] What is the model used in the world?

[37:19] What is the model used in?

[37:23] globally, a lot of data has been taken and trained.

[37:25] So now if you want to make a video with an LLM, you type in an old man walking on the street, dragon spits fire, but suddenly there is snow, everything is normal, right?

[37:35] So these global LLMs create a scene, effectively democratize VFX.

[37:42] Cost of creating a video, 800 rupees, 900 rupees for a small three-second or ten-second video.

[37:48] We use what I call proprietary build SLM, small language model, where global data doesn't matter.

[37:54] We do first-party data, your own face recording for five minutes, a small local model will be created on your face.

[38:00] That model can make videos for one to two rupees, three rupees, so by an order of magnitude of 100x cheaper.

[38:07] much faster, you know, and better.

[38:09] So faster, better, cheaper.

[38:11] Faster because it's a small model.

[38:13] Cheaper because it's a small model.

[38:15] Better because it's local first-party data.

[38:18] You can make a celebrity face in any LLM.

[38:21] Global models, LLMs are averages.

[38:23] We are, you know, one percent.

[38:25] So we put in the one percent.

[38:27] Short answer, build our own model the hard way and still today continue to use our own model in the ways that we use it.

[38:36] Last two questions, one is how do you price your products based on cost or based on value?

[38:42] Yeah, so I think it's a bit of both frankly, right?

[38:44] It's based on what they can pay.

[38:46] So sometimes they pay cost plus, sometimes they pay price.

[38:48] You know, we are kind of building the sector.

[38:51] As a young startup, you don't want to not do the business, right?

[38:53] Sometimes you do business because you have to do the business.

[38:56] There is a logo, you can show it in the market.

[38:58] So whatever cost you have, it will be done, right?

[39:01] Slowly, what will happen?

[39:02] The market will have a standard set.

[39:04] We incur cost on creating every video, so it will be always what I call token based, usage based.

[39:09] The more sort of per minute use, you kind of use, the per minute you have to pay.

[39:13] And those will be kind of, you know, near standards to people believe.

[39:17] What I believe is our net revenue retention, 145%, which means a customer who comes in with us for one year, he spends 100 rupees, next year it will for sure be 145.

[39:27] So I believe we are driving that value.

[39:28] Over time, as the world is changing, the cost of modeling will be

less, the machine will be efficient, so ROI should increase.

[39:34] Today is basically we take money on what we get.

[39:37] That's the answer.

[39:39] Last I think is we have all become desensitized to text because there is a proliferation of it.

[39:46] Do you hope, do you think the same can become for video as well?

[39:50] Yeah, it will be, it will be.

[39:51] So there will be a baseline, right?

[39:52] So today the baseline is text, the baseline will become a video.

[39:56] And one of the important things that we believe, that will sell again, the question should be asked, What will happen five years down the line?

[40:03] Don't know, right?

[40:04] What will for sure not happen is I believe video will be the best form of communication.

[40:09] I don't think we know any other form of communication today which is non-video.

[40:13] The biggest companies in the world are Instagram, YouTube, you know, Netflix, etc.

[40:17] All sort of three, three, four, four hundred billion dollars companies.

[40:20] So we believe.

[40:21] There's an asymmetric bet on video.

[40:23] Now, how do you use video?

[40:25] How do you use them well?

[40:26] I also believe, you know, as an enterprise to do my relationship with my customers, my dealers, etc.

[40:33] I'd like to communicate it better.

[40:34] And therefore, we believe that the requirement will be video first and the new baseline will come in.

[40:39] You know, rest duties out, you know, every question today we as a young company also would have an answer to, but yeah, I hear you.

[40:46] Alright, Nimesh, that was a fascinating presentation.

[40:49] Thank you so much for your time and sharing this with us.
